CYBERSECURITY HEALTH CHECK WORKSHOP

Safeguard Your Business with a Cybersecurity Health Check Workshop

Just like we all need to have regular check-ups to evaluate our physical health, organizations should periodically have a health check of their cybersecurity efforts.

The GDT Cybersecurity Health Check Workshop provides valuable insights into the health of your cybersecurity ecosystem and capabilities. This workshop provides actionable security insights with recommendations to help you make informed decisions to protect your digital assets, mitigate risks, and safeguard business operations.

GDT Cybersecurity Health Check Workshop

Our structured and interactive workshop provides participants with practical knowledge, skills, and tools related to cybersecurity. GDT's cybersecurity experts tailor the topics of each workshop to address the specific business and cybersecurity requirements of your organization.

Cybersecurity Health Check Workshop Scope:

- **Cybersecurity Health Check Workshop:** A 4-to-6-hour interactive workshop facilitated by a GDT cybersecurity expert to gather information and details that will be used to evaluate the organization's cybersecurity health.

- **Cybersecurity Program Review:** GDT's cybersecurity experts will conduct a high-level analysis of your organization's cybersecurity program's current capabilities.

- **Cybersecurity Tool Analysis**: Essential security protections deployed within the organization's existing tools are evaluated to ensure appropriate coverage or identify any potential gaps.

- **External Exposure Risks:** A review of the organization's external cybersecurity posture and publicly facing exposures is conducted along with dark web analysis to identify any potential risks.

Cybersecurity Health Check Workshop Deliverables:

- **Report of Findings**: The results of expert analysis along with the identification of potential program gaps.

- **Prioritized Recommendations:** Any recommendations provided to address findings are prioritized based on risks to the organization.

- **Dark Web Scorecard:** The report includes a scorecard of the organization's external security posture based on information and organization elements exposed within the dark web or exposed to the public internet.

- **Results Briefing:** GDT's cybersecurity analysts will provide a briefing to present findings and discuss recommendations.
